

2841 DOOR RELEASE SWITCH

APPLICATIONS

The 2841 Door Release Push Switch is suitable for use in conjunction with fire doors, which are held open by electro-mechanical door hold equipment interfaced with fire alarm systems.

The 2841 unit provides the opportunity to manually release the doors by pressing the spring-loaded switch from a position local to the doors without the need to operate the fire alarm.

FEATURES

- Single Gang Format
- Surface or Flush Mounting
- Suitable for 240v AC or 24v DC Arrangements
- Alternative Metallic Finishes Available

OPERATION

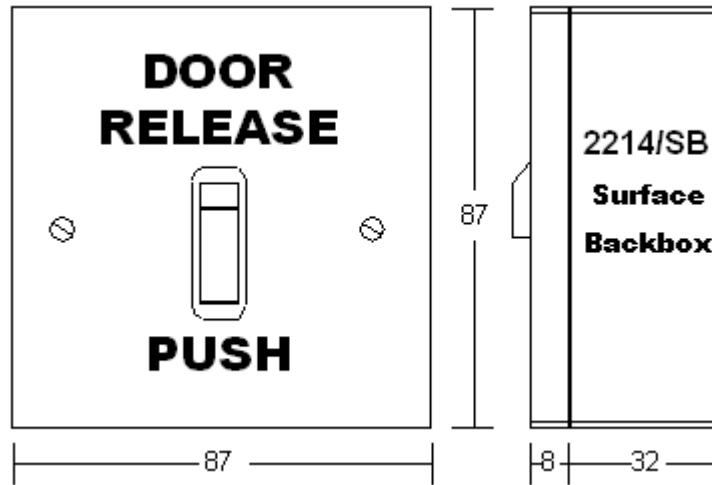

The 2841 Door Release Switch is suitable for use on 240v AC and 24v DC arrangements whereby fire doors are held open by electro-mechanical door holders, but automatically released on the operation of the fire alarm system.

Operating the switch will cause the doors to close without the need to operate the fire alarm. The standard engraving is as shown in red.

The unit is supplied for flush fitting on a standard single gang socket box, alternatively a matching white plastic back box can be supplied for surface mounting as an optional extra.

The unit can also be manufactured in metallic finishes to special order.

2841 DOOR RELEASE SWITCH

When ordering please note that a matching white surface back box (order code 2214/SB) is available as an optional extra.
